

# Taking Life Science further

[bioiberica.com](http://bioiberica.com)

At Bioiberica, everything we do is driven by an unstoppable desire to **improve the health and wellbeing** of people, animals and plants.

## Taking Life Science further

It's in our nature to be curious. To look closer, think bigger, and discover new possibilities. To take Life Science further.

We've been doing it for more than 40 years, and as a leading specialist in the global life science industry, we keep exploring new horizons.

We work to identify, extract and develop quality APIs and ingredients and turn them into high-quality products to progress the pharmaceutical, nutraceutical, veterinary, feed and agricultural industries.

It's how we grew to become the world's leading heparin API manufacturer, and how we help our customers discover new possibilities too.

Together with our commitment to excellence, safety, security and sustainability, we explore new horizons. And in the process, take all that we do even further.

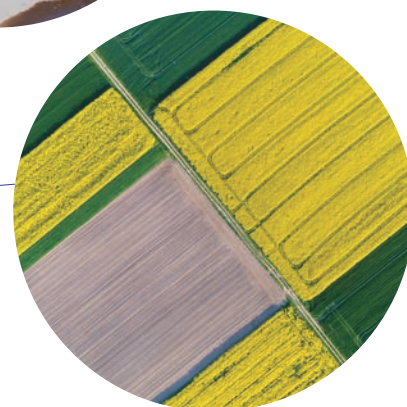

# Making a positive impact

We're finding solutions to some of the most significant challenges of our time. This includes helping progress the science behind human, animal and plant health.

More than 20 million people benefit from our APIs and nutraceutical ingredients, every year.

More than 100 million animals have better nutrition and health, thanks to our ingredients.

2.5 million hectares of agricultural crop benefit from our plant health solutions.

## Human health

Ever since Bioiberica was founded in 1975, we have demonstrated our commitment to people's health and wellbeing.

During these four decades, we have specialised in the research, development, production and marketing of biomolecules of high biological and therapeutic value for the pharmaceutical and nutraceutical industries.

Now, we are a world reference in the research and production of animal-derived APIs, ingredients and compounds.

### HEPARIN

We are the world's leading heparin API manufacturer. We first started researching and producing heparin in 1975. It is now the most used anti-coagulant and anti-thrombotic drug in the world, saving more than 100 million lives every year.

### HEALTHCARE

Based on our firm commitment to Life Science, we have developed a wide range of ingredients for pharmaceutical and nutraceutical products. This includes Thyroid, Chondroitin sulfate, Glucosamine, Native type II collagen and Hyaluronic acid.

Joint health and mobility is one of our main areas of specialisation.

# Animal health

We are experts in offering science-based solutions to improve animal health.

This includes the development of products that support the health of domestic pets suffering from chronic illnesses, alongside innovative feed ingredients that optimise the performance and health of production animals.

## COMPANION ANIMAL HEALTH

Within companion animal health, our commitment lies in improving a pet's quality of life.

We are experts in science-based solutions that improve the health of pets with chronic illnesses. And we do this with products that contain high-quality ingredients, which are safe and highly palatable. Our products treat joint and dermal health issues, as well as internal medicine disorders.

## ANIMAL NUTRITION

Our animal nutrition products are designed to improve the immunological and intestinal health of farm animals, aquaculture species and pets during early developmental stages.

We are leaders in the development of hydrolysed proteins, while also offering a range of highly concentrated nucleotides, specifically designed for individual animal species.

# Plant health

At Bioiberica, we contribute to agricultural progress – offering sustainable solutions to overcome plant stress, increase crop performance, and enhance quality parameters.

We research and develop pharmaceutical quality biomolecules across three key areas:

We have more than 30 years of experience in the agronomic field, supported by more than 1,500 trials in all type of crops, in over 60 countries. We commercialise our branded range of products and provide customised solutions for formulation purposes.

## BIOSTIMULATION

## PLANT NUTRITION

## PLANT BIOPROTECTION

# Supply chain excellence

When it comes to the way we work, our production model is based on the use of natural raw materials of animal origin in the most efficient way.

As a vertically-integrated company, we can guarantee full traceability and quality control throughout the whole production process.

Once the raw material is selected, it is then processed at one of our nine state-of-the-art manufacturing facilities. Located in Spain, Germany, Poland, Italy, the United States and Brazil, each site is fully compliant with the most restrictive and up-to-date regulations and Good Manufacturing Practice (GMP) standards.

The result: a product of the highest possible quality.

In addition, our global footprint means we can provide our customers – located in more than 80 countries around the world – with unparalleled reliability and production efficiency.

All Bioiberica plants have implemented a common quality control system and environmentally friendly processes to ensure consistency in sustainability.

## A circular economy company

Bioiberica delivers a truly circular economy, driven by our ambition to be a zero-waste company.

In doing so, we create products and materials that are safe for human health and the environment, and which can be reused perpetually through biological and technical processes.

We only source raw materials that are 100% biologically-based. From our manufacturing processes, used to develop pharmaceutical and nutraceutical products for human and companion animal health, we are able to obtain valuable co-products. These materials are then utilised to create added-value feed ingredients and biostimulants.

In addition, our processes are designed to minimise consumption of water, energy and auxiliary raw materials, and therefore our impact on the environment.

This results in a final product that is 100% biological, while also being environmentally friendly.

We are seeking **strategic collaborations with like-minded companies and institutions**, to develop new innovative products.

## Your Life Science partner

No matter whether we're working towards goals in human, animal or plant health, our R&D department possess an unstoppable desire to explore new horizons.

However, the real power comes from working in partnership with ambitious companies looking to progress the industries in which they work.

We actively seek strategic collaborations with like-minded companies and institutions that share our philosophy to continue exploring, growing and innovating.

Providing complementary scientific, regulatory, industrial and market expertise, Bioiberica is the ideal partner to develop new animal-derived APIs, ingredients and compounds in highly competitive and specialised areas.

These include: glycosaminoglycans, proteins and bioactive peptides of non-recombinant origin, complex lipids and other high-value biological substances.
